IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

 (Previously Presented) A method for acquiring caller-specific information, said method comprising:

receiving a call for completion from a calling party;

querying a local cache for caller-specific information associated with said calling party;

obtaining said caller-specific information from said local cache if said caller-specific information is found in said local cache;

forwarding said caller-specific information to complete said call; and querying a remote database if said caller-specific information is not found in said local cache, wherein said querying said remote database is performed by said local cache over a signaling network different from a communication network carrying said call.

- (Original) The method of claim 1, wherein said caller-specific information is a calling name of said calling party.
- 3. (Canceled)
- (Previously Presented) The method of claim 1, further comprising: obtaining said caller-specific information from said remote database.
- (Previously Presented) The method of claim 4, further comprising: storing said caller-specific information obtained from said remote database in said local cache
- 6. (Previously Presented) The method of claim 5, further comprising:

defining a limited period of time wherein said caller-specific information obtained from said remote database is to be stored in said local cache.

- 7. (Canceled).
- (Canceled).
- (Previously Presented) An apparatus for acquiring caller-specific information, said apparatus comprising:

means for receiving a call for completion from a calling party;

means for querying a local cache for caller-specific information associated with said calling party;

means for obtaining said caller-specific information from said local cache if said caller-specific information is found in said local cache:

means for forwarding said caller-specific information to complete said call; and

means for querying a remote database if said caller-specific information is not found in said local cache, wherein said means for querying said remote database is performed by said local cache over a signaling network different from a communication network carrying said call.

- 10. (Original) The apparatus of claim 9, wherein said apparatus is a switch.
- (Canceled)
- 12. (Previously Presented) A system for acquiring caller-specific information, said system comprising:

a local cache for querying a remote database if caller-specific information is not found in said local cache over a signaling network different from a communication network carrying a call: and

at least one switch for receiving said call for completion from a calling party, wherein said at least one switch queries said local cache for said caller-specific information associated with said calling party, and wherein said at least one switch obtains said caller-specific information from said local cache if said caller-specific information is found in said local cache and forwards said caller-specific information to complete said call.

Claims 13. - 20. (Canceled).
